

**Beatrice...A Quality Technology Provider For Your Business**

Beatrice offers your business an array of quality communications products to keep your business running efficiently, and we have been offering businesses a clear choice in quality since 2001. The list of companies that Beatrice deals with have been leaders in their respective markets for decades, and have the depth and knowledge to provide the best in class of communications services, and are used by most of the Fortune 500 companies in America. Our trained technicians are experts in their respective fields, and Beatrice has more than thirty five years of combined trained talent that know what they are doing.

CommScope is the worlds largest manufacturer of coax, voice and computer data cabling products, and their products are American made, and NOT MADE IN CHINA! CommScope also has the highest performance rating of any manufacturer, and they ensure that their metrics are higher than the industry average, which helps reduce latency and cross-talk on computer networks. No other manufacturer can come close to the reliability and quality of CommScope. Beatrice works with certified PartnerPRO CommScope installation companies that have the breadth and knowledge to configure your network for peak performance.

Beatrice also offers IBM Power Server technology, and IBM Storage systems. IBM Power can have either IBM AIX or Linux installed. We have installed systems at doctors offices, call centers and small businesses, and Beatrice ensures that your computer network is secure from unauthorized employee abuse, to unauthorized hackers and intrusions that would compromise your data files.

As part of a robust IT data and storage network, Beatrice uses only UNIX and Linux operating systems, and we have the expertise to ensure that you have a system that is virtually impenetrable from typical attacks on your data that would be stored on your servers. As part of our UNIX server platform, we are trained in IBM AIX, and for the workstation, Mac OS X, which is a certified UNIX platform. For basic and not as complex server systems, we use Red Hat, CentOS or ubuntu Server Linux. For all other desktop workstations, we install ubuntu Linux, which is secure, reliable, user-friendly, and integrates with the UNIX/Linux server systems. UNIX and Linux based operating systems are more secure from malware, viruses, and cyber attacks than Windows. If Windows is required, we use a programme called VirtualBox, which allows you to run any variety of Operating systems, including any version of Microsoft Windows, all within in UNIX or Linux!

Beatrice also offers a complete suite of offerings from Lenovo, which includes ThinkCentre, ThinkPad, and ThinkVision. We have been able to offer high quality equipment from Lenovo at affordable prices, and you will find our installed hardware at a wide variety of business locations.

For durable and reliable printing, Beatrice uses Lexmark printers, which work in various business environments. When you go to most banks, they use Lexmark, because of the quality and reliability. We can offer a wide variety of printing technology for your business from Lexmark to suit your particular needs.
